

# WP-PLUGIN DOCUMENTATION

## Quick Start Guide

This Booking Plugin will help you to easily create a booking platform for trip/delivery into your WordPress website or blog. The booking platform provides a lot of booking widgets, booking forms, order sent and payment forms.

### Plugin Installation

To install Booking Plugin, download it from the <https://3bit.app> website after purchase. Once it has been downloaded unzip the file and upload the **3bit.zip** file to your WordPress website either through the user interface or by unzipping it and using an FTP.

**Warning! Please ensure WooCommerce is installed before you using Booking Plugin Settings for WooCommerce synchronization! It will not work without it.**

If you want to update Booking Plugin with any of the future updates that will be published you will first need *Export* data to restore file in the Plugin Settings and delete the old version of the Plugin from your website (this will delete your Plugin data). After this, upload the new version of the Plugin to your website and activate it, *Import* data in the Plugin Settings from file for restore. Use Plugin Update key for automatic update the Plugin from the Update server.

### Database Codepage

Ensure you have selected the correct codepage for the backend database. To do this go to Hosting administration console, such as cPanel, start phpMyAdmin tool and set UTF-8 codepage for the database schema, if You will works with not only latin languages. If you want to UTF-8 for the database schema follow these steps (Recommendation for database Collation with UTF-8 codepage):

- Step 1 – Before WordPress install to Your database backend, set the Database Collation to UTF-8 (such as: `utf8_general_ci` or `utf8mb4_unicode_ci`).
- Step 2 – Before the Booking Plugin install to WordPress CMS set the Server Connection Collation to UTF-8 (such as: `utf8_general_ci` or `utf8mb4_unicode_ci`).

The screenshot shows the phpMyAdmin interface. On the left, the 'Databases' tab is active, displaying a table of databases with columns 'Database', 'Collation', and 'Action'. The table lists 'fireart' with collation 'utf8mb4\_unicode\_ci' and 'information\_schema' with collation 'utf8\_general\_ci'. Below the table, it says 'Total: 2' and 'latin1\_swedish\_ci'. On the right, the 'General settings' panel is open, showing 'Server connection collation' set to 'utf8\_general\_ci'.

Database	Collation	Action
fireart	utf8mb4_unicode_ci	<a href="#">Check privileges</a>
information_schema	utf8_general_ci	<a href="#">Check privileges</a>
Total: 2		
latin1_swedish_ci		

### Plugin Timezone

Ensure you have selected the correct time zone you are in. To do this go to WordPress administration console Plugin Home > AdminPanel > Users&Features > Settings > Set the *time\_zone* value as UTC offset (such as, +02:00).

### Displaying the Booking Form

To display the Booking Plugin booking, payment and widget forms, use the **shortcode** `CallCustomForm` see details in the article for **Shortcodes**.

## Google API Key Issues

If you are seeing the following error message when you try and book an order ("Book now" or "Send an Order" in the Plugin booking forms or "Find" locations in the WordPress administration console Plugin Home > AdminPanel) then there is an issue with your Google Maps API key.

**Warning! API keys with referer restrictions cannot be used with this API.**

This means you have either not enabled the services required for Booking Plugin to work or there are some restriction on the API key.

Please log into your Google Console and ensure the following services are activated:

- Google Maps JavaScript API
- Google Maps Places API
- Google Maps Geocoding API
- Google Maps Directions API

Also ensure the Google Maps API key can be used by the website you are hosting Booking Plugin on.

If you are still getting the same error after the above steps try disable the HTTP restrictions completely and check again. If it works after this there are some issue with the HTTP restrictions you have placed on the Google Maps API key. Read [this guide](#) for more information on how to configure Google Maps API key settings (Using API Keys read [this guide](#)).

## Automatic installation

To add Booking Plugin using the built-in plugin installer:

- Step 1 - Go to **Plugins > Add New** in WordPress administration console.
- Step 2 - Click **Upload Plugin** on top of the page.
- Step 3 - Click **Choose File** and select **3bit.zip** from your computer, the one you downloaded from <https://3bit.app>.
- Step 4 - Click **Install Now** to install Booking Plugin.
- Step 5 - After installation is complete, click **Activate Plugin** to activate Booking Plugin.

## Manual installation

The manual installation of Booking Plugin requires FTP familiarity.

- Step 1 - Connect to your web server with your FTP program.
- Step 2 - Go where your WordPress files are, to the folder **wp-content/plugins**.
- Step 3 - Upload the folder **3bit** from the zip file you downloaded.
- Step 4 - Go to **Plugins** screen, in WordPress administration console, and find the newly uploaded Booking Plugin in the list.
- Step 5 - Click **Activate** to activate it.

## The server crashed

When installing or updating the Plugin, due to the large number of processes that run only when the Plugin is installed, it is possible that your server will crash.

One solution is to increase the memory allocated to PHP. WordPress provides [instructions](#) on how to do that.

## Installation failed

If the Booking Plugin did not install properly, or you have problems with WordPress administration console after installation, please write us to the Support and we will debug the problem for you.

The problem is always caused by incompatibility with another plugin, theme or the server is not configured correctly.

## Get Plugin Update key

Once you ordered Booking Plugin from <https://3bit.app>, you will receive an email with your order which contains the Plugin Update key.

You can also get your Plugin Update key from your account on <https://3bit.app>. There, you will have the list of all your keys.

## Activate your Plugin Update key

To activate your Plugin Update key follow the steps:

- Step 1 - Sign into your WordPress administrative console.
- Step 2 - Go to **Plugin Home > Settings** page.
- Step 3 - Select **Plugin Update key** input field.
- Step 4 - Enter the Update key and click on "Save" button at the bottom.

## Update your Plugin

Before update the Booking Plugin to a new version automatic in WordPress administrative console Plugins > 3bit > Update, *Export* Plugin data (Plugin Home > Settings > Export) to restore SQL file (backup dump) and save style CSS file /admin/css/style.css (if you have changed it).

## How to use Custom CSS style in Plugin

You can use private CSS styles for the Plugin booking, payment and widget forms by changing file /admin/css/style.css for HTML tags or classes. The Booking Plugin using Bootstrap3 framework (Bootstrap4 in future version 1.2). You can specially defined other private CSS style file in WordPress administration console Plugin Home > AdminPanel > Users&Features > Settings > Set the *style\_script* value as filepath to Your private CSS file.

## Import and Export data

You can *Import* (Plugin Home > Settings > Import) old data or backup dump to the Booking Plugin (this is especially important after using website copying utilities, such as **Duplicator** plugin). Before using website copying utilities, You can do *Export* data in Settings page of the Booking plugin. *Export* saving Your data of the Booking plugin in SQL format. You can use SQL file to restore Your data by **phpMyAdmin** tool of Your hosting provider (Import/Export tools for SQL dump). Normal case to restore Your data is *Import* in Settings page of the Booking Plugin (Plugin Home > Settings > Export). Attention! When You restored Your website by thrid-part plugin, highly recommended restore Plugin's procedures and functions by *Restore Plugin routines After WordPress restore* (set the switch to ON and save the *Settings*).

## Using Demo API parameters

You can use (Plugin Home > Settings > Plugin API Parameters) Demo *Plugin API parameters* (*Plugin API url*, *Plugin API key*, *Username*, *Password*) for the Booking Plugin administrative tools: *Admin Panel*, *Cabinet*, *Calendar*, *Map*, *Order* (fast order creation), *Transport* (fast transport booking) pages. You can only for preview demonstrative data schema from remote database backend.

## Using Private API parameters

You can use (Plugin Home > Settings > Plugin API Parameters) Private *Plugin API parameters* (*Username*, *Password*) for the Booking Plugin administrative tools (*Plugin API url*, *Plugin API key* must be empty for Your Local database backend). Go to *Cabinet* administrative page and can change password credentials on the *User profile* tab (default is 'admin'). For create other one administrative credentials Go to *Admin Panel* page and open Admin Panel > Users & Features > User and click on '+' button for creation. Private API parameters using for

the Booking Plugin administrative tools: *Admin Panel, Cabinet, Calendar, Map, Order* (fast order creation), *Transport* (fast transport booking) pages.

## Plugin Forms parameters

You can use (Plugin Home > Settings > Plugin Forms) Definitions and Limitation parameters for *Plugin Forms*: *Distance Measurement, Minimum Distance, Maximum Distance, Date Format, Time Format, Map Zoom, Country, Order Tax, Acceptance Regions* and Theme colors. For using Your private messages for *Minimum Distance, Maximum Distance, Acceptance Regions* and *Order Available Ontime* mismatch in the *Plugin Forms*, input Your strings to *Messages* (Plugin Home > Settings > Messages). More parameters and messages available Plugin Home > Admin Panel > Users & Features > Settings.

### Plugin Forms

Distance Measurement = km

**Distance Measurement**  
Km

🔍 Minimum Distance (in meters) 100

🔍 Maximum Distance (in meters) 1000000

📅 Date Format (DD.MM.YYYY) DD.MM.YYYY

🕒 Time Format (HH:mm | hh:mm A) HH:mm A

🔍 Map Zoom 6

### Acceptance Regions

Clear Region

## How to Use Plugin Email notifications

You can use (Plugin Home > Mailings) *Mailings* as Email notifications in the Booking Plugin for events: *Password Recovery* (for mobile app), *New Order, Order Status* changed, *Payment Confirmation*. Email notification in the Booking Plugin can be sent to Event owner (Order creator, Password recovery creator) and to one Administrator by email address. **Warning! Very important use recommended by Your hosting provider SMTP settings.** Specify parameters for using: SMTP hostname (use prefix ssl:// or tls:// for security purposes, such as ssl://smtphostname.com:465), SMTP username, SMTP password. You can define text of notify messages for event and set up the events You want use for notification.

### SMTP Settings

Highly recommended to Get a Credentials from Your SMTP Provider [Mailgun Provider](#).

SMTP hostname SMTP hostname

SMTP username SMTP username

SMTP password SMTP password

### Message of Password Recovery

Using editor for HTML Message design, where %s is a string of User password

## How to Use Plugin Payment gateways

You can use (Plugin Home > Gateways) *Payment gateways* in the Booking Plugin: *PayPal*, *Stripe*, *LiqPay*, *Braintree*. You can use *Cognalys* provider for phone number verify (for mobile app). *PayPal* and *LiqPay* require callback functions for payment result backend notify. Specify callback's URL for *LiqPay* and create URL with *PayPal Webhook Id* on *PayPal* administration console for developers (<https://developer.paypal.com>). Specify administration credentials for work with callback notify: *Administrator username for callback function*. Use type of payment 'Sanbox' for gateway debug, and 'Production' for work in payment mode. For creation gateways keys and other parametes use next links (for create account and for create keys and debug use developer's link) and follow the instructions on the website:

- *PayPal* <https://www.paypal.com> for developers <https://developer.paypal.com>
- *Stripe* <https://stripe.com> for developers <https://stripe.dev>
- *LiqPay* <https://www.liqpay.ua>
- *Braintree* <https://www.braintreepayments.com> for developers <https://developers.braintreepayments.com>

## How to Use Plugin Tax for customers

You can use (Plugin Home > Gateways) *Tax* for customers in the Booking Plugin: *Client*, *Driver*. *Tax* for customers is Your side fee for using Your system for *Clients* and *Drivers*. You can use *Tax* for customers for: every *Order*, per *Month* (in value or percent from Order price). Sum of funds will be decrease *Prepaid amount* of User when Orderer, per Month. Customer can increase own private *Prepaid amount* (Account Balance) in the *Payments* tab of the *Cabinet* page.

## Plugin Cabinet page

You can use (Plugin Home > Cabinet) *Cabinet* page for administrative purpose and control with the tabs *Sent orders*, *Reports*, *Messages*, *User profile* and *Payments* :

- Bookings in descending order (*Complete the Order* set Driver for Order, *Reset a Status* for Order Status, *Payment order*, *Cancel Order*)

- *Tracking of Clients and Drivers*
- *Messages from Customers to Administrator*
- *Private User profile*
- *Private Payments to Prepaid amount (Account)*

## Plugin Map page

You can use (Plugin Home > Map) *Map* for real-time *Orders* and *Transports* preview (For watching set the switch-button "Watching" in ON position, Attention! GPS devices in *Transports* installed), control every *Transport* by smart control buttons under Transport's name for *Location*, *Watch*, *NoWatch* actions (for selected *Transport*).

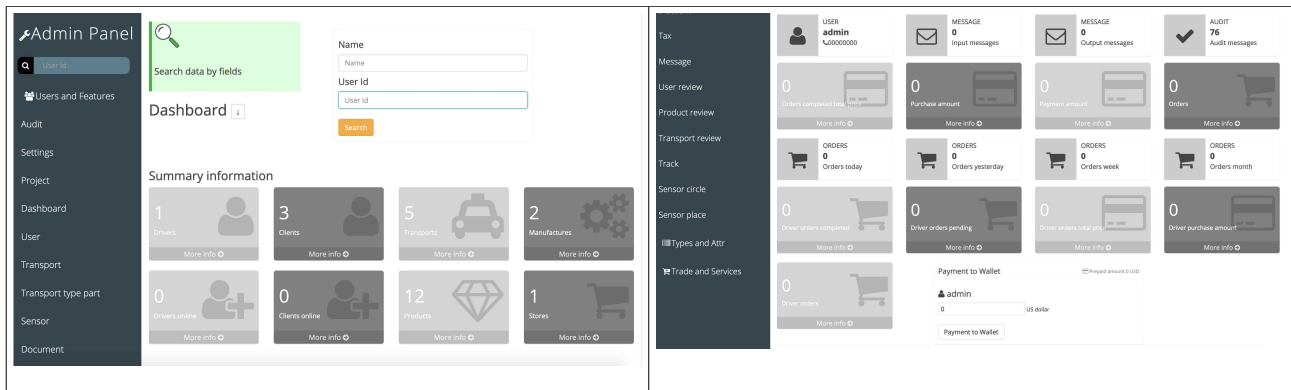

## Plugin Admin Panel page

You can use (Plugin Home > Admin Panel) *Admin Panel* for Plugin's data manipulation and administrative control. Data separated to 3 groups: *Users and Features*, *Types and Attr*, *Trade and Services*.

*Users and Features* provides data audit, system settings, users, transports and other base objects information for the system:

- *Audit* system events audit log
- *Settings* system settings for bookings and other options
- *Project* system information of remote of local installed database backend
- *Dashboard* summary information for administrator or for selected customer
- *User* list of customers profiles with *Prepaid amount* (Account Balance)
- *Transport* list of transports with attached *Sensor* (GPS device)
- *Type-bound Transport* list of transports that have a type
- *Sensor* list of GPS devices
- *Document* list of customers documents that have been sent to system
- *Discount* list of features that increase or decrease a price of Service or *Product* by Code
- Tax list of features that increase a price of Service or *Product* in Order and list of customers fee (for clients or drivers) for using system.
- *Messages* list of administrative messages, using for technical or important issues
- *User review*, *Product review*, *Transport review* customers reviews of *User*, *Product*, *Transport*
- *Track* tracking points list of GPS devices
- *Sensor circle* list of temporary united customers *Sensors* for visibility of their *Track* one to other, when *Order* not completed
- *Sensor place* list of important locations of customers *Sensors*

*Types and Attr* provides types and attributes parameters of the base objects of the system:

- *Attr* attributes parameters names list
- *Attr binding* list of translations for the objects of the system and data formats (such as, Currency)
- *Color* list of colors
- *Currency* list of currencies with only one active (main)
- *Language* list of languages that used for translations
- *Delivery type* list of types for delivery *Products*
- *Store type* list of type for store
- *Track type* list of types for *Track*
- *Order place* list of places that used in Booking Forms and Widgets (depends of type) for pickup and dropoff Locations
- *Order status* list of *Order* status. **Warning! Don't remove any of status records, all status has been reserved for Booking Forms and Widgets, Mobile applications.**
- *Pickup status* list of pickup status for Shared Trips
- *Product param* list of add-on parameters or Services for *Products*
- *Product type* list of calculate formulas of products, identifier by Value
- *Transport type* list of types for *Transport*

Order place

Address of Location

## How to create Products for Booking forms

Highly recommended using rule for new *Products* creation (\* required) : 1. *Manufacture* > 2. *Product* \* > 3. *Product param part* > 4. *Product type part* \* > 5. *Stock* \*. Set up *Currency*, *Product param* (if you need add-on parameters or services to *Product* and attach to *Product* by *Product param part*) for bookings.

## How to set up Add-on Booking parameters

You can use add-on options in Plugin Home > Settings for Booking Forms and Widgets:

- Distance Measurement (miles/kilometers)
- Date and Time Format (day - month – year, hours – minutes)
- Country and Map Zoom (country on map and zoom)
- Order Tax (calculates *Tax* for *Order*)
- Theme Color (color of pages visual objects)
- Acceptance Regions (limited borders for *Order*)
- Custom Messages (messages for warnings)
- Maximum Order Hourly (maximum hours for *Product* rental with *Product type* Value == 3)
- Maximum Passengers Count (maximum passengers for *Order*)
- Order Price per Minute (additional price per minute for *Product type* Value == 8)
- Return Price Ratio (multiplication factor to price for customer return trip)
- Surge Price Ratio (multiplication factor to price for some time of day)
- Surge Price Time Range (hours of day when price up)
- Order Time Schedule (hours of day for Service Booking Forms)
- Order Available Ontime (working hours of day for *Order*)
- Distance Included to Tariff (distance for *Product type* Value == 7)

## How to use Plugin with WooCommerce

If you want to integrate the Booking Plugin with WooCommerce follow these steps:

- Step 1 – Go to WordPress administration console Plugin Home > Settings and Set option *WooCommerce products synchronization*.
- Step 2 – Go to WordPress administration console Plugin Home > Settings and Set option *WooCommerce orders synchronization*.
- Step 3 – Save WooCommerce synchronization options for Settings of the Booking Plugin.

Warning! After saving WooCommerce synchronization options Triggers for the Booking Plugin tables and for WooCommerce tables will be created. The Booking Plugin Triggers automatic copy data (from Booking Plugin to WooCommerce) when *products*, *orders* objects created. After restore database or duplicated data from other server need to restore options for WooCommerce synchronization.

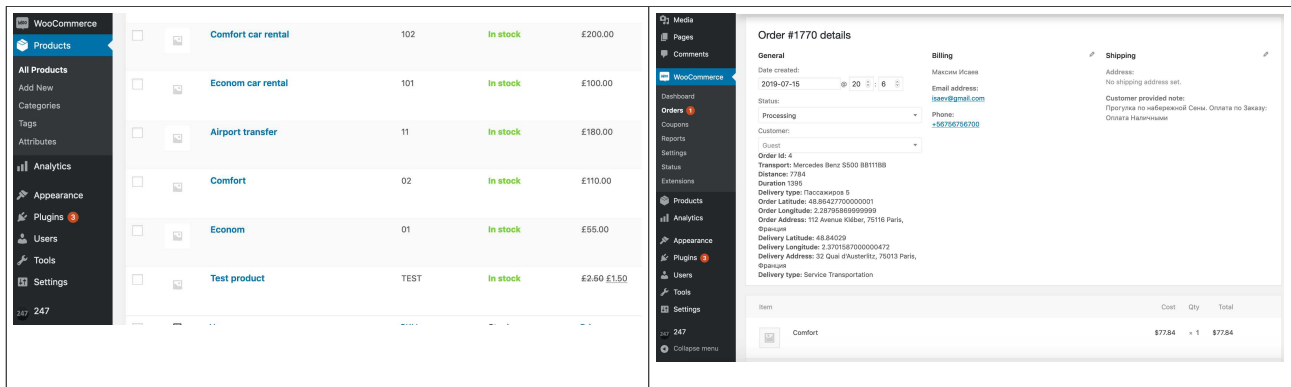

## Plugin data Synchronization with WooCommerce

Plugin data Synchronization with WooCommerce in automatic mode by Triggers for the Booking Plugin and WooCommerce data tables. When You created *products* or *orders* in the Booking Plugin platform similar WooCommerce objects created. *Products* can be edited in the Booking Plugin and in WooCommerce with automatic data copying by Triggers. **Warning! Pictures don't copy automatic.**

The screenshot shows the Booking Plugin's administrative interface. On the left is a sidebar with navigation links: Users, Tools, Settings, Admin Panel, Order, Transport, and Scheduled Order. The main area is titled 'Product' and contains a table with the following data:

ID	Picture	Manufacture	Discount	Name
1		3bit [Taxi service (Shipping and taxi service. We are is a good choice)]	A	Econom
2		3bit [Taxi service (Shipping and taxi service. We are is a good choice)]	B	Comfort
3		3bit [Taxi service (Shipping and taxi service. We are is a good choice)]		Airport transfer
4		3bit [Taxi service (Shipping and taxi service. We are is a good choice)]		Econom car rental
5		3bit [Taxi service (Shipping and taxi service. We are is a good choice)]		Comfort car rental

On the right side of the interface, there is a 'Route of Order' section showing a map of Paris with a route highlighted. The order details include: Order id=4, Phone: +56756756700, Address: 112 Avenue Kléber, 75116 Paris, France, and a list of nearby locations like Le Centre Pompidou and Le Jardin de Luxembourg.

## Plugin users Synchronization with WordPress

Plugin *users* Synchronization with WordPress in automatic mode by Triggers for the Booking Plugin and WordPress data tables. When You created *users* in the Booking Plugin platform similar WooCommerce objects created. *Users* can be edited in the Booking Plugin and in WooCommerce with automatic data copying by Triggers. **Warning! Pictures don't copy automatic. All *Users* will be created with empty password! Change password after *new user* was created.**

If you want to integrate the Booking Plugin *users* with WordPress follow these steps:

- Step 1 – Go to WordPress administration console Plugin Home > Settings and Set option *WordPress users synchronization*.
- Step 2 – Save WordPress synchronization option for Settings of the Booking Plugin.

## Plugin Shortcode version 2

**Shortcode** of Booking Plugin for WordPress is **CallCustomForm**, using with a lot of *parameters*. Forms are built using the framework Bootstrap4. Alternative name of shortcode is **\_3bit\_custom\_form**.

Example : [**CallCustomForm** *page\_name=cabinet.html tab\_number=2 username=admin password=admin map\_provider=google language=ENGLISH*]

*Parameters* of the **Shortcode**:

*page\_name* – name of *Custom* form (always required)

*tab\_number* – number of tab on *Cabinet* form

*order\_id* – number id of order on *Cabinet* form

*username* – default Login credentials

*password* – default Login credentials

*map\_provider* – plugin map provider (required *values* : “google”, “yandex”, “osm”, “here”, “mapbox”, “mapquest”. **Warning!** Maps Directions, Geocoding, Places using by default **Google Maps** API provider, for map preview using one of selected provider)

*language* – use Language on form (one of values */admin/json/messages.json* in field “name” of messages array, such as “name”: “ENGLISH”, *english by default*)

*callback* (or *order\_callback* for Booking forms) – Callback page href for Login, Register or Booking forms (call as *location.href* in javascript)

*widget\_callback* (or *callback*) – Widget form Callback page href for call form page after widget on main page (call as *location.href* in javascript)

*input\_data* – input data (Id numbers of products) for use in Booking form or Widget form

*TripBookingForm*

[**CallCustomForm** *page\_name=forms/bookings/trip\_booking.html*]

*TripRentalBookingForm*

[**CallCustomForm** *page\_name=forms/bookings/trip\_rental\_booking.html*]
